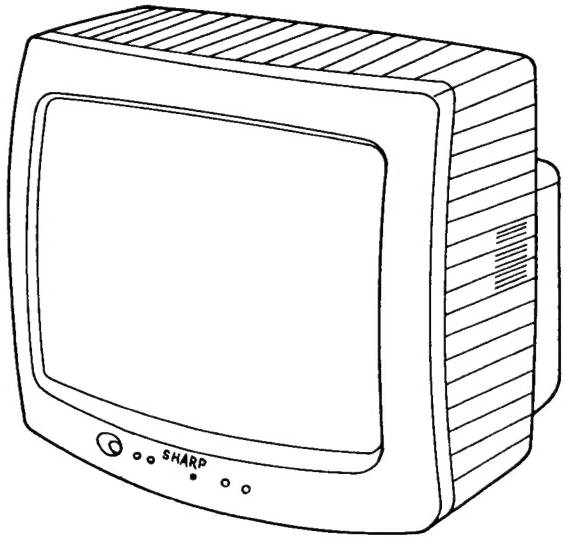
SHARP SERVICE MANUAL

S35M113G-M60/



COLOR TELEVISION

Chassis No. SN-50

MODEL 13G-M60

In the interests of user-safety (Required by safety regulations in some countries) the set should be restored to its original condition and only parts identical to those specified should be used.

SHARP ELECTRONICS CORPORATION

INSTALLATION AND SERVICE INSTRUCTIONS

Note: (1) When performing any adjustments to resistor controls and transformers use non-metallic screwdriver or TV alignment tools.
(2) Before performing adjustment, TV set must be on at least 15 minutes.

CIRCUIT PROTECTION

The receiver is protected by a 4.0A fuse (F701), mounted on PWB-A, wired into one side of the AC line input.

+ 120V DC REGULATOR ADJUST-MENT

The + 120V DC Adj. control (R706) is adjusted at the factory. However, should readjustment be required, proceed as follows:

1. Actuate the receiver with 120V AC input voltage.
2. Select a local channel.
3. Connect positive lead of Digital Voltmeter to C712(positive side) on PWB-A; negative lead to chassis ground.
4. Adjust R706 to obtain a + 119V DC reading.

CAUTION: The reading should be within + 119V ± 1VDC to ensure normal function and circuitry reliability.

X-RADIATION PROTECTOR CIRCUIT TEST

1.After service has been performed on the horizontal deflection system, high voltage system, or + B system, test the X-Radiation protection circuit to ascertain proper operation as follows:

1) Apply 120V AC using a variac transformer for accurate input voltage.
2) Allow for warm up and adjust all customer controls for normal picture and sound.
3) Check the voltage of test point TP654. (It's voltage should be about 19.7V DC.)
4) Apply external 25V DC at TP654 by using an external DC supply, The increased voltage will cause the TV to shut off.
5) Turn on the power again. Unplug the AC power cord, wait 5 seconds, and plug the AC power cord in the outlet again.

   Next turn on the power and make sure the image is normal on the screen.
6) If the TV dose not shut off in step 4, the circuit must be repaired before the set is returned to the customer.

2. When the IC2001 or IC2702 has been replaced, recheck the X-ray protector in the following steps.

1) Select a local channel.
2) Connect a digital voltmeter to TP654 and make sure that the voltmeter reads 19.7 ± 1.5V.
3) Enter the service mode and select service adjustment"S32".
4) Push the CH-UP or CH-DOWN key on the remote control and make sure the data changes. (SPECD33-40)
5) Now take the steps 4, 5 and 6 in the X-radiation protector circuit test.

HIGH VOLTAGE CHECK

High voltage is not adjustable but must be checked to verify that the receiver is operating within safe and efficient design limitations as specified checks should be as follows:

1. Connect an accurate high voltage meter between ground and anode.
2. Operate receiver for at least 15 minutes at 120V AC line voltage, with strong air signal or properly tuned in test signal.
3. Set Service mode on,service No.S19and Bus data D1(Y-mute on).
4. The voltage should be approximately 23.5kV (at zero beam).
   If a correct reading cannot be obtained, check circuitry for malfunctioning components. After the voltage test,make Y-mute off (normal mode).

CONNECTING NOTICE

1. The following connecting cords of this model do not have any symbols which identifi the connection points on the PWB.
   In servicing this model, Instead the wires of these cords are color-coded as shown in Table 1.

PARTS CODE	SYMBOL ON PWB	PIN NO./WIRE COLOR				
		1	2	3	4	5
QCNW-1769PEZZ	GC	GREEN	BROWN	WHITE	WHITE	WHITE
QCNW-1768PEZZ	YC	YELLOW	BROWN	WHITE	WHITE	-

Table-1

The F-series SHARP TVS have most of the analog setup adjustments eliminated. Coil and variable resistor adjustments are now performed digitally by using the remote transmitter or set's volume and channel change function buttons.

Note: There are still a few analog adjustments in the F-series such as 120V adjust, focus, master screen voltage and coils in the picture if/detector circuit.

Follow the steps below whenever service adjustment is required. See table "B" to determine if service adjustments are required.

1.Service mode -

Before putting unit into the service mode, check, that customer adjustments are in the normal mode. use the reset function in the video adjust menu to ensure customer controls are in their proper (reset) position.

To enter the service mode -

Momentarily short TP2001 to TP2002 (see figure A) .

CAUTION: During the adjustment, keep TP2001 and TP2002 short-circuited. Re aware TP2001 to TP2002, be aware that as these test points are shorted they toggle between service and normal. when successfully entered, the service mode will be displayed as shown in figure "B". The "S" figure (in the left hand bottom corner) stands for service adjustment and the number following "S" is the service adjustment number (see figure "B"). in the right hand bottom corner is the letter " D" which stands for data,followed by a number which is the digital value of the adjustment.

To exit service mode-

Turn off the power or unplug the set.

2. Service number selection

Once in the service mode, press the channel up or channel down button on the remote transmitter or at the set. the "S" number (service adjustment number) will vary in increments of one, from 1 to 25 (table"A") . Select the item you wish to adjust.

3.Data number selection

Press the volume up or down button to adjust the data number in the lower right hand side of the screen.

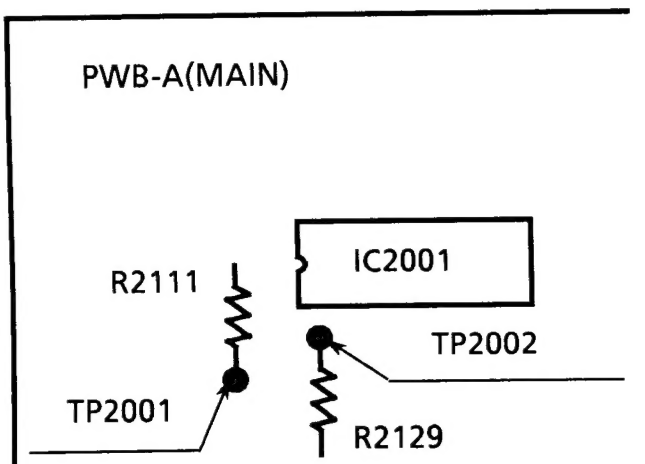

Figure A

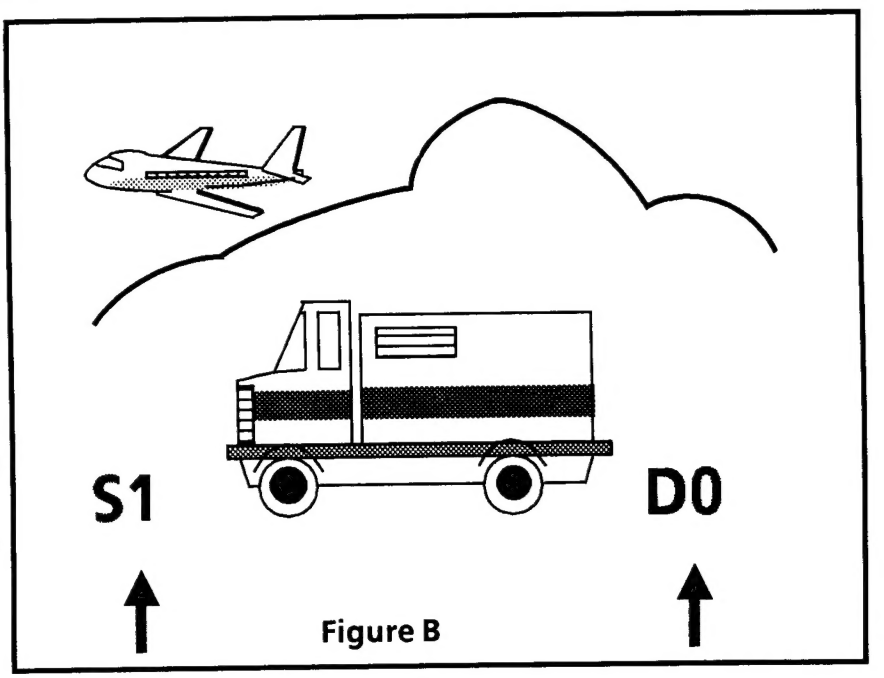

Figure B

SERVICE NUMBER	ADJUSTMENT ITEM	DATA		ADJUSTMENT COMMENTS
		INTIAL VALUE	RANGE	
S1	SUB-PICTURE	85	0-127	
S2	SUB-TINT	70	0-127	
S3	SUB-COLOR	50	0-127	
S4	SUB-BRIGHTNESS	64	0-127	
S5	SHARPNESS	36	0-63	
S6	VERTICAL PHASE	0	0-7	Must be set to "0"
S7	HORIZONTAL POSITION	18	0-31	
S8	RF-AGC	35	0-63	"0"produces a no picture symptom-black raster.
S9	VERTICAL SIZE	32	0-63	
S10	VCO	60	0-127	
S11	R CUT-OFF	0	0-255	
S12	G CUT -OFF	0	0-255	
S13	B CUT-OFF	0	0-255	
S14	G GAIN	127	0-255	
S15	B GAIN	127	0-255	
S16	TRAP(3.58MHz)	0	0-1	"0" = ON,"1" = OFF
*S17	BPF	1	0-1	"0" = Bandpass,""1" = Take off
*S18	BLANKING	0	0-1	"0" = Normal,"1" = NO Blanking
S19	Y-MUTE/VERT,COLLAPSE	0	0-3	"0" = Normal raster,"1" = no"Y" "2" = Test mode ,"3" = NO Vertical
*S20	HORZ.AFC	1	0-1	"0" = x2 gain,"1" = normal gain
S21	WHITE PEAK LIMITER	1	0-1	
*S22	60Hz	0	0-1	"0" = Normal viewing"1" = not available
S25	CAPTION POSITION	23	0-15	
S32	X-RAY PROTECTOR	36	33-40	

*No adjustment is required due to proper setting being made by IC2001 automatically.

Table - A

PART REPLACED	ADJUSTMENT		NOTES
	NECESSARY	UNNECESSARY	
IC2001		×	Data is stored in IC2702.
IC201	×		The adjustment is needed to compensate for characteristics of parts including IC201.
IC2702	×		Initial setting values are written from IC2001.Adjust for best results.
CRT	×		Adjust items related to picture tube only.

Table - B

■ Service adjustment

VCO Adjustment

1. Connect a digital voltmeter between pin 44 of IC201 and ground.
2. Select a good local channel.
3. Enter the service mode. select adjustment "S10".
4. Adjust the data so that digital voltmeter should read 2.2V.
5. Adjustment is complete, remove the voltmeter, return to "normal" mode.

RF AGC Adjustment

1. Have unit receive a good local channel.
2. Enter the service mode and select service adjustment "S8".
3. Set the data value to point where no noise or beat appears.
4. Select another channel to confirm that no noise or beat appears.

NOTE 1 : You will have to come out of the service mode to select another channel.

NOTE 2 : Setting the data to "0" will produce a black raster.

Screen adjustment

1. Connect a digital voltmeter between TP852 and TP853 on the CRT socket PWB.

Note: These test points may not be provided.
Then connect the voltmeter to both ends of R852 located near Q852 on the foil side.

2. Select a good local channel.
3. Enter the service mode and select service adjustment "S3" and set the data value to "0" to set the color level to minimum. You may skip this step if you selected a B/W picture or monoscope pattern.
4. Select service adjustment "S19" and adjust the data value to "1" this turns off the luminance signal (Y-mute).
5. Select service adjustment "S4" and adjust data value to obtain 0.17volts on the digital voltmeter.
6. Adjust the master screen cotrol untill raster darkens to the point where raster is barely seen.
7. Adjust service adjustments "S11" red, "S12" green and "S13" blue to obtain a good grey scale with normal whites at low brightness level.
8. Select service adjustment "S19" and reset data to" 0" Select service adjustment "S3" and reset data to obtain normal color level.
9. Remove digital voltmeter. reset master screen cotrol to obtain normal brightness range.

White balance adjustment

1. Have unit receive a good local channel.
2. Enter the service mode. select service adjustment "S3" and set to "0" (minimum color) . "S3" does not have to be adjusted if you selected a B/W picture or monoscope pattern.
3. Alternately adjust service adjustment data of "S14" and "S15" untill a good grey scale with normal whites is obtained.
4. Select service adjustment "S3" and adjust data to obtain normal color level.

Sub-picture adjustment

1. Have unit receive a good local channel.
2. Make sure the customer picture control is set to maximum.
3. Enter the service mode and select service adjustment "S1".
4. Adjust the data value to achieve normal contrast range.

Sub-Tint Adjustment

1. Have unit receive a good local channel.
2. Set customer tint control to center of it's range.
3. Enter the service mode and select service adjustment "S2".
4. Adjust "S2" data value to obtain normal flesh tones.

Sub-color adjustment

1. Have unit receive a good local channel.
2. Make sure the customer color control is set to center position .
3. Enter the service mode and select service adjustment "S3".
4. Adjust "S3"data value to obtain normal color level.

Sub-brightness adjustment

1. Have unit receive a good local channel.
2. Make sure the customer brightness control is set to center position.
3. Enter the service mode and select service adjustment "S4".
4. Adjust "S4"data value to obtain normal brightness level.

Vertical-size adjustment

1. Have unit receive a good local channel.
2. Enter the service mode and select service adjustment "S9".
3. While observing the top and bottom of the screen, adjust "S9" data value to proper vertical size and linearity.

Vertical phase adjustment

1. Enter the service mode and select service adjustment "S6".
2. Adjust data value to "0".

Note: This must be set "0" when adjust another data retrace line will be appear.

Horizontal position adjustment

1. Have unit receive a good local channel.
2. Enter the service mode and select service adjustment "S7".
3. Adjust "S7" data value so that picture is centered.

Caption position adjustment (horizontal)

1. Have unit receive a good local channel.
2. Enter the service mode and select service adjustment "S25".
3. A black text box appears on the screen (see figure C) .
4. Adjust "S25" data value so that text box is positioned in the center of the screen.

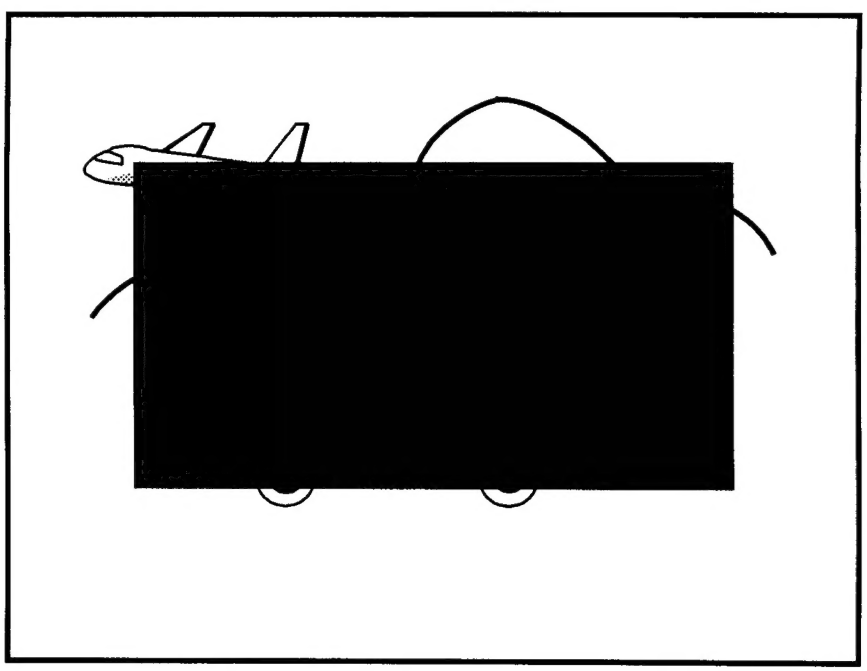

FIgure-C.

Horizontal AFC adjustment

1. Have unit receive a good local channel.
2. Enter service mode and select service adjustment "S20".
3. For normal viewing, adjust data value to "1" which is normal AFC gain.
4. If increased horizontal gain is required, adjust data value to "0" for two times normal gain.

Blanking adjustment

1. Have unit receive a good local channel.
2. Enter the service mode and select service adjustment "S18".
3. This is a two position adjustment, "0" is normal blanking and "1" turns blanking OFF.
4. Adjust data value to " 0" for normal viewing.

White peak limiter (wpl) adjustment

1. Have unit receive a good local channel.
2. Enter the service mode and select service adjustment "S21".
3. This is a two position adjustment, "1" is ON, "0" is OFF.
4. Adjust data value to "1" for normal viewing.

3.58MHz trap adjustment

1. Have unit receive a good local channel.
2. Enter the service mode and select service adjustment "S16" .
3. This is a two position adjustment, "0"is ON , "1" is OFF.
4. Adjust data value to "0" for normal viewing.

Bandpass filter (BPF) adjustment

1. Have unit receive a good local channel.
2. Enter the service mode and select service adjustment "S17".
3. This is a two position adjustment, "0" is bandpass, "1" is OFF.
4. Adjust data value to "1" for normal viewing.

Sharpness adjustments

1. Have unit receive a good local channel.
2. Enter the service mode and select "S5" for sharpness .
3. Adjust data value to "36" (center of data range) for sharpness adjustment.

60Hz adjustment

1. Have unit receive a good local channel.
2. Enter the service mode and select "S20".
3. The 60Hz adjustment is a two position , "0" is normal viewing. "1" is not used .
4. Adjust data value to "0".

NOTE: If data value is set to "1", you will have a "no sync" condition.

To exit the service mode, turn off power or unplug the set.

REPLACEMENT PARTS LIST

SAFETY NOTE — Components marked with a (⚠) have special characteristics important to safety. Before replacing any of these components, read carefully the SAFETY NOTICE on page 3 of the Service Manual. Components marked with an (▲) are related to X-Ray Protection circuit.

HOW TO ORDER REPLACEMENT PARTS — To have your order filled promptly and correctly, please furnish the following information:
1. MODEL NO. 2. PART NO. 3. DESCRIPTION

Contact your nearest SHARP Parts Distributor to order.
For location of SHARP Parts Distributor, Please call Toll-Free; 1-800-BE-SHARP

DESCRIPTION OF SCHEMATIC DIAGRAM

NOTE:

1. *The unit of resistance "ohm" is omitted (K:1000 ohms, M:1 Meg ohm).*
2. *All resistors are 1/8 watt, unless otherwise noted.*
3. *All capacitors are μF, unless otherwise noted P: μμF.*
4. *(G) indicates ±2% tolerance may be used.*

VOLTAGE MEASUREMENT CONDITIONS:

1. *All DC voltages are measured with VTVM connected between points indicated and chassis ground, line voltage set at 120V AC and all controls set for normal picture unless otherwise indicated.*
2. *All voltages measured with 1000μV B & W or Color signal.*

WAVEFORM MEASUREMENT CONDITIONS:

1. *Photographs taken on a standard gated color bar signal, the tint setting adjusted for proper color. The wave shapes at the red, green and blue cathodes of the picture tube depend on the tint, color level and picture control.*
2. *indicates waveform check points (See chart, waveforms are measured from point indicated to chassis ground.)*

⚠ *AND SHADED (▒▒) COMPONENTS = SAFETY RELATED PARTS.*

▲ *MARK = X-RAY RELATED PARTS.*

This circuit diagram is a standard one, printed circuits may be subject to change for product improvement without prior notice.
